ASSISTANT SCIENTIST

Department of Medicine
Indiana University Medical Center

A Ph.D. in immunology or biochemistry with a strong background in molecular biology and 3 — 5 years' post-doctoral training is preferred. The program emphasizes the study of the biochemical and molecular events which accompany the activation of cytotoxic lymphocytes. The starting date is open until a suitable candidate is selected.

Please submit a curriculum vitae and three letters of recommendation to:

Zacharie Brahmi, Ph.D.
Dept. of Medicine and Micro-Immunology
Indiana University Medical Center
702 Barnhill Drive, Riley S-09
Indianapolis, IN 46202-5128

Experimental and Molecular Pathology

presents articles on disease processes in relation to structural and biochemical alterations in mammalian tissues and fluids and on the application of the newer techniques of analytical chemistry, histochemistry, pharmacology, toxicology, and electron microscopy to problems of pathology in humans and animals. The journal also includes studies on the mechanism of action of drugs, vaccines, and pyrogens, among other topics, when related to alterations in tissue.

Research Areas Include

- Chemotherapy
- Endocrinology
- Geographic pathology
- Immunology
- Nutrition
- Virology

The Dictionary of Cell Biology

edited by

J.M. Lackie and J.A.T. Dow

Cell Biology forms the link between the molecular life sciences and the rest of biology and medicine. Its vocabulary is broad and borrows widely from other disciplines. **The Dictionary of Cell Biology** presents nearly 4000 terms which cover classical cell biology and spill over into the adjacent fields of molecular biology, neurobiology, physiology, immunology, and pathology. Synonyms are provided where necessary and generous cross-referencing links terms that are related.

This dictionary will not only serve as an essential reference to students of cell biology, but as an invaluable *aide memoire* to research workers in this and other related areas. For the curious amateur and scientific journalist it provides a key to the technical literature and a guide to proper spelling and terminology.

Molecular Biology of the Fission Yeast

ed by

Warren Nasim, Paul Young, and Byron F. Johnson

Volume in the CELL BIOLOGY Series

This highly researched yeast, which represents a system used by cell biologists, geneticists, and molecular biologists has been given only minimal coverage in the literature. Its proper use makes it an excellent organism for DNA and related molecular biology research. This book, which is the first attempt to bring existing information in one source, will be an invaluable aid to those initiating projects with this organism.

CONTENTS: Genetics Overview. Mating-Type Genes, Sporulation, and Sporulation. Informational Suppression, Transcription and Intergenic Conversion. Oncogene Homologs. Cell-Cycle Controls. Cell-Cycle Growth and Periodicities. Cloning and Expression in Fission Yeast. General Cytology of Fission Yeast. Morphogenesis of Fission Yeasts. Continuous Culture and Intermediary Carbon Metabolism. Plasma Membrane H⁺-ATPase; Ion and Metabolite Transport in the yeast *Schizosaccharomyces pombe*. Taxonomy and Phylogenesis. Each chapter includes references. Index.

Cell Structure and Function by Microspectrofluorometry

edited by

Elli Kohen

A Volume in the ANALYTICAL CYTOLOGY Series

The microspectrofluorometric approach provides the most direct access to the *in situ* regulation, organization, and reciprocal interactions of intracellular compartments and organelles. This comprehensive volume describes the origin of fluorescence microscopy and details the development of the methodology as it is used today.

CONTENTS (Section Headings): History. Methods. Metabolism. Fluorescent Probes. Cytometry and Cell Sorting. Bioluminescence.

ANALYTICAL BIOCHEMISTRY

Methods in the Biological Sciences

Editor-in-Chief

WILLIAM B. JAKOBY

National Institutes of Health, Bethesda, Maryland

Editorial Office: 1250 Sixth Avenue, San Diego, CA 92101

Analytical Biochemistry emphasizes methods and methodology in the biological and biochemical sciences and all related fields. The journal publishes original research as well as reviews of methods.

Publishing Methods in:

- Cell biology, general cell and organ culture
- Membranes and membrane proteins
- Molecular genetics: cloning, sequencing, and mutagenesis
- Novel methods of protein purification
- Immunological techniques of applicability in biochemistry
- Immunoassays that introduce a unique approach
- Pharmacological and toxicological research techniques

Volumes 184-191 (1990), 16 issues

ISSN 0003-2697

In the U.S.A. and Canada: \$968.00

All other countries: \$1157.00
